TECHNICAL INFORMATION 2019

ALCOVE **MODELS ON** *IVECO AND MERCEDES*

The Concorde "Cruiser" stands for a luxury class alcove which defines and unites terms like sense of space, quality, size, mobility and performance. The three used chassis have in common the rear drive for a good traction and a high carrying capacity for ample vehicle load capacity. Since size isn't everything, we have refined the floor plan versions; this results in the optimum combination of wellness oasis and a functional living environment.

THE STANDARD HIGHLIGHTS OF THE CRUISER

1 ALUMINIUM CHECKER PLATE IN THE REAR GARAGE

Heavy equipment strongly strains the garage floor. Permanent protection ensures the aluminium checker plate. No matter what you want to transport.

2 DREAM ALCOVES

The particular high interior in the alcove offers an incomparable room feeling. The comfortable access and the optional equipment such as TV and panorama skylight ensure a marvellous comfort.

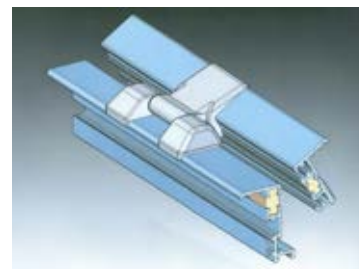

3 DOUBLE FLOOR STORAGE AREA

The heated double floor with the enormous interior height of 420 mm offers a generous amount of storage space and is easily accessible through the large storage space flaps which can be rotated by 180°.

4 THERMAL BREAK FLAP FRAMES

- Frames with thermal break through polyurethane intermediate store.
- Special Concorde hinges enable a complete opening of the flaps.
- The double sealing avoids a "freeze on" through condensate formation.
- Anodized aluminium profile to avoid contact corrosion.

5 MINERAL KITCHEN WORKTOP WITH STAINLESS STEEL SINK

High-quality mineral kitchen worktop and the hygienic stainless steel sink grant a clean atmosphere. Well-thought-out details make the housework easier. The support for the two-parts sink cover enables the use of this space as an additional work surface and the storage area for a Nespresso coffee machine are the evidence for an exquisite style.

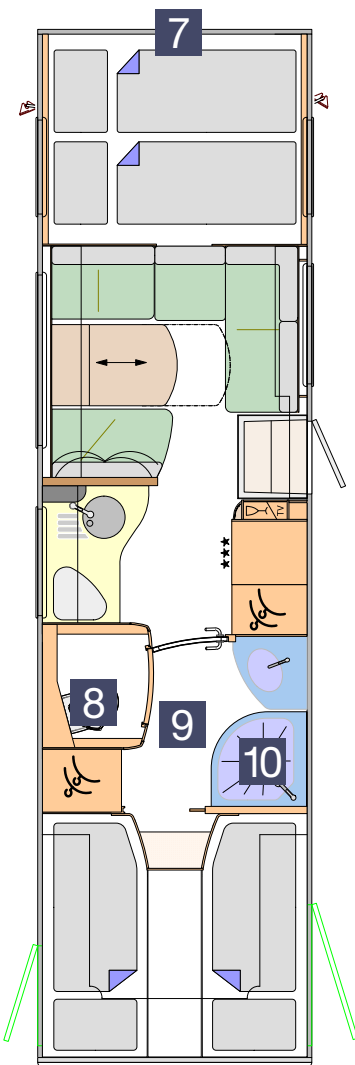

6 SINE WAVE INVERTER 600 W

The sine wave inverter continuously supplies small consumers such as chargers and ventilators with power. The mains priority circuit automatically turns the inverter voltage into shore power. The inverter is switched off and the vehicle battery is not unnecessarily strained when your motorhome is using external power.

THE STANDARD HIGHLIGHTS OF THE CRUISER

TWO CHASSIS

For the Alcove floor plans, two chassis are available. The Iveco Daily with an 8-gear ZF converter automatic transmission and the Iveco Eurocargo, a "lightweight" commercial vehicle chassis with plenty of torque.

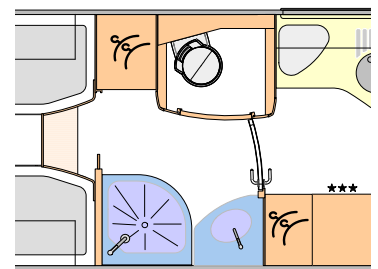

CASSETTE TOILET WITH PORCELAIN BOWL

The width and depth of this by 180° rotatable WC bowl have been adapted based on the tests of customers and therefore offers a maximum of comfort.

THE BATHROOM CONCEPT

The bathroom concept in the Cruiser with rear bed combines the advantages of the standard bathroom with those of the premium bathroom. Two doors for higher discretion, one separates the bathroom from the bedroom and the second separates either the toilet room or the living room from the bathroom. A second wardrobe in the bathroom offers storage during longer holidays.

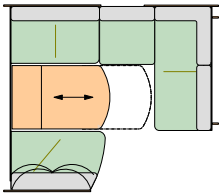

JOHN GUEST HOUSEHOLD PIPING

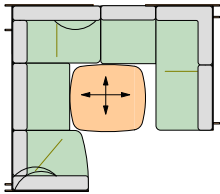

A water system like at home. With prefilter and high water pressure. The advantages are clear: No cross-section tapers with reduction in the flow rate at junctions, no loss of pressure as is the case with flexible hoses. Smooth interior walls prevent deposits and ensure better water hygiene, keeping everything neat and clean.

Concorde uses only the highest-quality fabrics and leather with a special dirt-repellent coating.

The mass in running order contains: The dry weight of the standard equipment including the driver (75 kg), filled fuel tank, 100 l of fresh water, filled gas tank, vehicle tool kit. The empty weight and dimensions can change if special equipment and accessories are installed. All dimension and weight specifications correspond to the state of knowledge at the time of printing. Deviations of +/- 5% are possible and permissible.

SECTIONAL DRAWING

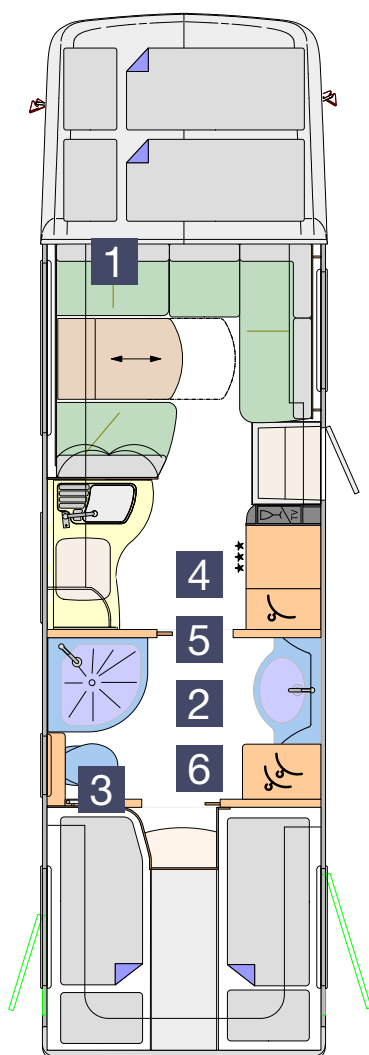

CABIN CONSTRUCTION **OF THE CONCORDE CRUISER**

When it comes to motorhome construction, Concorde stands for perfect insulation and excellent stability. The reasons for this are primarily the Solidtherm cabin construction, completely bonded and free of thermal bridges, with PU rigid foam strips as well as the side wall insulation with 38 millimetre-strong RTM foam.

But that's not all: The underbody and in-between floors are manufactured in a sandwich design and equipped with a total of 70 millimetres of insulation. Side coverings, bumpers and front and rear sections are also made of highly-stable yet elastic fibreglass composite material.

The high-gloss and level wall surfaces made of aluminium composite make for a high-quality automobile appearance. And to make sure it stays that way, the aluminium roof profile strips with the rainwater channels effectively reduce the collection of dirt on the side walls. A 10-year impermeability warranty against moisture ingress from outside for the body of the vehicle with annual check in accordance with the Concorde guarantee conditions.

THE STANDARD HIGHLIGHTS OF THE CRUISER

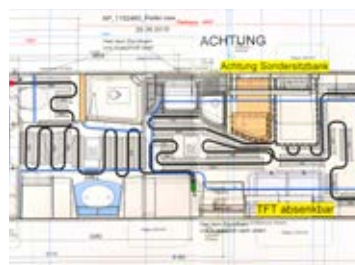

1 HEATED DRIVER'S CABIN SEPARATING WALL

Two additional heating areas separate the unheated driver's cabin. Located in the neck area are warm air streams which increase the well-being.

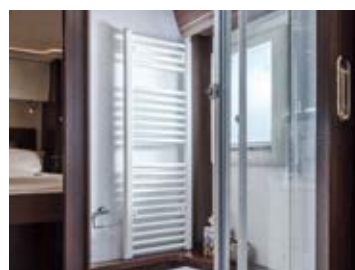

2 TWO-ZONE FLOOR HEATER

For a pleasant feeling: Two separate floor heatings means the living room and bathroom floor can be heated separately.

3 TOWEL RADIATOR IN BATHROOM

The towel radiator provides cosy warmth in the bathroom and the luxury of a warmed towel. Combine this with the floor heating and the bathroom becomes an oasis of spa-like proportions.

4 ROOM ZONE HEATING

The multifunctional adjustable hot water heating system creates three different warm areas which can be heated separately from each other: living room, wellness area and bedroom are heated by a thermostatic valve. Heat by every trick in the book.

5 AUXILIARY FRAME

The auxiliary frame is used to connect the body with the chassis and is the foundation of your motorhome. Such as the foundation walls which anchor a house on the land. A possibly warp resistant body is generated in combination with the double floor construction.

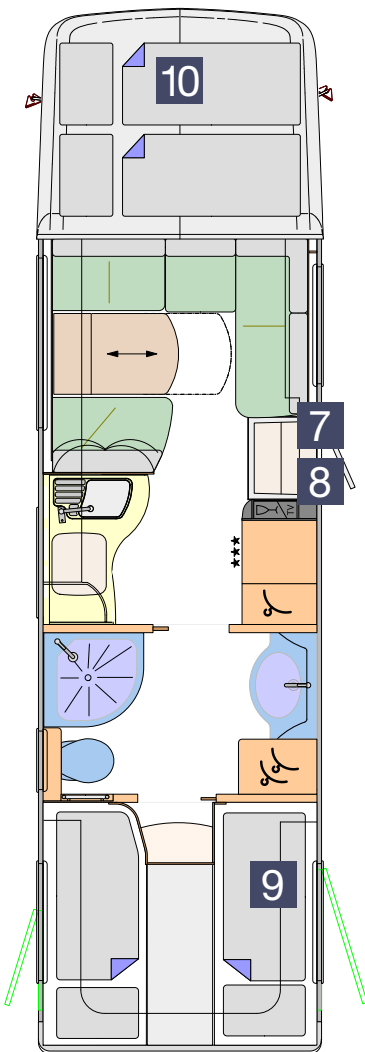

6 SUPPORTING CONSTRUCTION

Two aluminium frames in the Cruiser's double floor ensure an extremely stable "basement construction" by connecting the auxiliary frame with the living room floor, creating a solid box. This clever construction means that furniture and wall constructions remain firmly connected in the long run.

THE STANDARD HIGHLIGHTS OF THE CRUISER

"SECURITY PLUS" ENTRANCE DOOR

The "Security Plus" entrance door offers a particular break-in safety due to the key-less implementation. It is comfortably opened and closed with a key field with your own PIN.

COMING HOME

Illumination of the entrance step inside and outside – for a safe step and an illuminated return. No matter when you come "home".

ELECTRONICS PACKAGE

The serial power pack consists of a combination charger with a sine wave inverter from 12 V to 230 V, 3000 W peak and 1600 W continuous power with electronic control and mains priority circuit and a maximum charging current of 60 A. Additionally: two gel batteries with in total 340 Ah and its own 230 V supply.

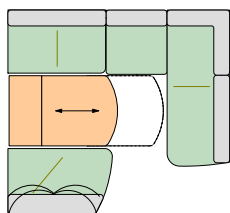

AUTOMATED GEAR TRANSMISSION

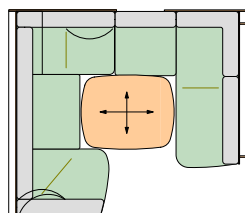

An automated 6-gear transmission transmits power. From 1230 L upwards the 8-gear Powershift-3 transmission is standard. In combination with the perfectly adjusted drive axle, Atego offers an efficient spontaneous and economic gear.

Concorde uses only the highest-quality fabrics and leather with a special dirt-repellent coating.

The mass in running order contains: The dry weight of the standard equipment including the driver (75 kg), filled fuel tank, 100 l of fresh water, vehicle tool kit. The empty weight and dimensions can change if special equipment and accessories are installed. All dimension and weight specifications correspond to the state of knowledge at the time of printing. Deviations of +/- 5% are possible and permissible.

SECTIONAL DRAWING

CABIN CONSTRUCTION **OF THE CONCORDE CRUISER**

When it comes to motorhome construction, Concorde stands for perfect insulation and excellent stability. The reasons for this are primarily the Solidtherm cabin construction, completely bonded and free of thermal bridges, with PU rigid foam strips as well as the side wall insulation with 38 millimetre-strong RTM foam.

But that's not all: The underbody and in-between floors are manufactured in a sandwich design and equipped with a total of 70 millimetres of insulation. Side coverings, bumpers and front and rear sections are also made of highly-stable yet elastic fibreglass composite material.

The high-gloss and level wall surfaces made of aluminium composite make for a high-quality automobile appearance. And to make sure it stays that way, the aluminium roof profile strips with the rainwater channels effectively reduce the collection of dirt on the side walls. A 10-year impermeability warranty against moisture ingress from outside for the body of the vehicle with annual check in accordance with the Concorde guarantee conditions.
