

CABBY

2009

I hope you find this year's catalogue inspirational and well worth reading.
Per Nilsson, MD Cabby

I am proud and happy! It's probably the best feeling I know. Proud that Cabby manufactures the Nordic region's best caravans. Happy that increasing numbers of people want to buy them. Because we do not take for granted that everyone will choose a Cabby just because it is best. We know that we have to nurture our concept and ensure that it is continually developed in order to live up to our customers' wishes and demands.

In this year's catalogue we present all the new models and naturally place a particular focus on the most important things that customers such as yourself need to know. And we know our customers. That's why we let you in on everything! You are probably just the same as I am when it comes to caravans. I want to know every detail;

- What do the new soft-close drawers look like?
- Why does a Cabby have better climate-comfort than its competitors?
- Why is a Cabby considered to be the safest caravan on the roads?
- And why is Cabby regarded as the best in the Nordic region?

I'll answer the last question immediately. According to the independent test in Husvagn&Camping in January 2007, Cabby was best in test and furthermore designated the caravan that offers most for the money. In other words, best and most!

We also want to defend that position with our new models. We have therefore not left anything to chance when planning, designing and manufacturing our new caravans.

I started by writing that I am proud and happy. Moreover, it's a feeling that I share with my colleagues at Cabby and with our retail dealers. Every day we go to work in the knowledge that we are working with a product that is appreciated by a lot of people. That's why it is easy to go that little bit further to ensure that everything is perfect.

So that on the following day we can go to work with pride and pleasure. And go that little bit further so that on the following day we can go to work with pride... I think you get my drift.

That's how we feel at Cabby and I am convinced that you will recognise that feeling when you enter one of our caravans. Have a good look through the catalogue, allow yourself to be inspired, decide what you want to have an extra look at and visit one of our dealers.

Then it won't be long before you can become a proud and happy owner of a Cabby.

Most for the money and best in test.

ATC is our unique system for safer driving.

Our soft-close drawers give the kitchen a luxury feel.

Our adjustable neck cushions with innovative design provides extra comfort.

The Cabby method

– just like a really good thermos!

In a Cabby it's warm inside when it's cold outside and cool inside when it's hot outside. With the market's best insulation, we are quite simply offering a caravan that is more comfortable to live in. And surely that's what you are after when you buy a caravan. Home comforts but with the freedom to live where you want.

Buying a Cabby means that you have invested in the best thermos, sorry caravan, of your life.

The Cabby method represents warmth and safety. Our unique method of insulation

delivers the best in caravans. Our waterborne underfloor heating system with three coils offers the market's best indoor climate. It's part of what we call the Cabby method. A highly effective polyurethane foam is injected between the outer and inner walls. This makes the caravan extremely well insulated against both the cold of winter and the heat of summer.

In a winter test carried out by the Danish magazine DCU, our caravan received ten out of the ten points available for heating comfort. No caravan has achieved this before.

Easy to tow, safe and with stable tracking

We have already boasted about the fact that the Cabby method offers you the market's best indoor climate. But it has one more effect!

Our superior insulation method also provides an extremely rigid body. In other words, safety into the bargain. Together with our other safety features, we have taken road-worthiness to a new dimension.

ATC – a part of the Cabby Safety System

The Cabby Safety System is the generic name for all our safety systems, a number of important features that produce what is one of the absolutely safest and most pleasant caravans to have behind your car. Easy to tow, safe and with track stability. Our caravans are constructed with millimetre precision. The safety features are not visible on the outside, but they

are a distinct part of the total experience when you tow a Cabby. You feel safe and are safe.

Our safety system includes the following components:

- An extremely well-balanced chassis from AL-KO (specially produced for Cabby).
- Unique suspension system.
- Delta axle – like a divided rear axle on a car.
- Nitrogen-filled, low-profile tyres.
- AKS stabiliser hitch.
- ATC – anti-skid system.
- Power Lock – attachment between walls and ceiling.
- Extra long traction spars and supporting H-beams for optimum road holding and service life.

Enjoy

Like a luxury hotel suite with wonderfully comfortable mattresses.
A top-class comfort zone.

*After a day full of activities
it is especially nice to get home to
your caravan and to simply enjoy.*

DOUBLE BED

CABBY F3

CABBY 570F3

A-dimension	980 cm	Internal length	510 cm
Total length body	580 cm	Internal width	217 cm
Total length	704 cm	Weight	1350–1700 kg

CABBY 570+F3

A-dimension	980 cm	Internal length	510 cm
Total length body	580 cm	Internal width	234 cm
Total length	704 cm	Weight	1370–1700 kg

CABBY 620F3

A-dimension	1,020 cm	Internal length	555 cm
Total length body	625 cm	Internal width	217 cm
Total length	751 cm	Weight	1420–1700 kg

CABBY 620+F3

A-dimension	1,020 cm	Internal length	555 cm
Total length body	625 cm	Internal width	234 cm
Total length	751 cm	Weight	1450–1700 kg

CABBY 650+F3

A-dimension	1,050 cm	Internal length	585 cm
Total length body	655 cm	Internal width	234 cm
Total length	796 cm	Weight	1500–1800 kg

CABBY 700+F3

A-dimension	1,100 cm	Internal length	630 cm
Total length body	700 cm	Internal width	234 cm
Total length	841 cm	Weight	1650–1800 kg

Smart and comfortable. It's not surprising that the Cabby F3 is one of our most popular models. The good-sized, dreamlike double bed is positioned at the very rear of the caravan, with the toilet right alongside. There are one or two wardrobes, depending on size. When you have finished sitting in the comfortable sitting area for the evening, it is simple to convert into two additional berths. The walk-in wardrobe and the well-equipped kitchen section complete the caravan.

Although the seats were already very comfortable, they have been further improved thanks to newly designed back and seat cushions and the transverse sofa in the sitting area has been given the same comfortable sitting depth as there is on the sides. The fact that a special and extremely comfortable head cushion is available as an optional extra makes the whole unit even better. Sit down and enjoy.

Snug and exclusive, but incredibly practical.

The new toilet concept in the 2009 Cabbies is more reminiscent of a luxury hotel than what was previously associated with caravans.

Have a cup of coffee and get connected. There is room here for both enjoyment and benefit.

Our walk-in wardrobe is not just for storage. There is also room for a TV and a cocktail cabinet here.

CABBY FT

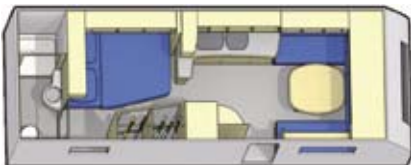

CABBY 650+FT

A-dimension	1,050 cm	Internal length	585 cm
Total length body	655 cm	Internal width	234 cm
Total length	796 cm	Weight	1,550-1,800 kg

CABBY 700+FT

A-dimension	1,100 cm	Internal length	630 cm
Total length body	700 cm	Internal width	234 cm
Total length	841 cm	Weight	1,650-1,800 kg

CABBY 740+FT

A-dimension	1,100 cm	Internal length	630 cm
Total length body	700 cm	Internal width	234 cm
Total length	841 cm	Weight	1,900-2,000 kg

CABBY 800+FT

A-dimension	1,195 cm	Internal length	740 cm
Total length body	810 cm	Internal width	234 cm
Total length	942 cm	Weight	2,000-2,400 kg

The FT 800 is a particularly spacious caravan with plenty of room for relaxation and spending time together. The generous double bed and the comfortable supplementary sitting area make it a perfect caravan for those who are not willing to compromise on comfort. The shower and toilet are to be found at the very back of the caravan.

In our 740+ we have focussed on smart storage and a practical angular kitchen.

We put comfort first and foremost in all our caravans. However, we always succeed in combining it with beautiful design. Why not choose the Dallas black upholstery as an optional extra?

Our large roomy bathroom with shower is just as good as the one at home. If not better?

The new lavatory makes the toilet and bathroom facilities perfect. It is not just a luxury feel – it is luxury.

Choose whatever you like with our smart range of accessories. You can replace the shower with additional wardrobes. All according to your liking, taste and requirements.

CABBY FM

CABBY 700+FM

A-dimension	1,100 cm	Internal length	630 cm
Total length body	700 cm	Internal width	234 cm
Total length	841 cm	Weight	1,650-1,800 kg

Of course it's nice to be able to be alone sometimes. In Cabby FM you get a two room caravan with a proper bedroom. The majestic double bed is positioned in the middle of the rear section of the caravan making it easy to get into bed, and there are bedside cupboards on both sides. The toilet and wardrobe are situated in the middle of the caravan and they screen off the bedroom from the kitchen section. The U-shaped sitting area is located there and it can easily be made up into two extra beds.

You will find new shelves in the corner by the sofa, with the same attractive design as the bedside table has. Use them for ornaments or as perfect storage spaces.

The smart and practical kitchen is equipped with everything for your comfort. Soft-close drawers and easy-to-clean surfaces make it easy to feel at home. The spice racks finish off the kitchen.

The bed is a dream for two. Light and airy when required – dark and cosy when you want it like that.

Relax

Stretch yourself out to your full length. Adjust the bed to the perfect position. Turn on the radio and join in with the music quiz.

The win was in the bag – afterwards we celebrated the victory with a really good cup of coffee.

CABBY L

CABBY 620L

A-dimension 1,020 cm Internal length 555 cm
Total length body 625 cm Internal width 217 cm
Total length 751 cm Weight 1,420-1,700 kg

CABBY 620+L

A-dimension 1,020 cm Internal length 555 cm
Total length body 625 cm Internal width 234 cm
Total length 751 cm Weight 1,450-1,700 kg

CABBY 650+L

A-dimension 1,050 cm Internal length 585 cm
Total length body 655 cm Internal width 234 cm
Total length 796 cm Weight 1,500-1,800 kg

CABBY 700+L

A-dimension 1,100 cm Internal length 630 cm
Total length body 700 cm Internal width 234 cm
Total length 841 cm Weight 1,650-1,800 kg

CABBY 740+L

A-dimension 1,135 cm Internal length 670 cm
Total length body 740 cm Internal width 234 cm
Total length 861 cm Weight 1,800-2,000 kg

Plenty of room and wonderfully spacious. With its superb double beds Cabby L is wonderfully airy and light. A wide central aisle completes the feel. The toilet and one or two wardrobes, along with the practical and attractive kitchen, are situated in the middle. Naturally the sitting area can be converted into beds, and it is situated at the very front of the caravan.

A completely new concept in mattresses gives you the perfect place for rest and relaxation. New foam in the mattresses makes them especially comfortable. The head end is adjustable and if you want to manoeuvre it electronically then this is available as an option. Talk about luxury. The rear window is an optional extra.

The shiny washbasin and all the practical storage is standard. In addition there is a toilet roll holder. If you also decide to have the electric towel dryer then there's nothing more you could possibly desire.

Our drawers are not just extremely roomy and practical. In addition the soft-close function means that wear is kept to a minimum and the noise level is as accommodating as the food you cook.

We listen to our customer's wishes.

That's why our innovative head cushion, which is easy to move wherever you like on the sofa, is now available. An especially luxurious optional extra!

CABBY LT

CABBY 700+LT

A-dimension	1,100 cm	Internal length	630 cm
Total length body	700 cm	Internal width	234 cm
Total length	841 cm	Weight	1,650-1,800 kg

CABBY 740+LT

A-dimension	1,135 cm	Internal length	670 cm
Total length body	740 cm	Internal width	234 cm
Total length	861 cm	Weight	1,900-2,000 kg

CABBY 800+LT

A-dimension	1,195 cm	Internal length	740 cm
Total length body	810 cm	Internal width	234 cm
Total length	942 cm	Weight	2,000-2,400 kg

Cooking really good food requires a good selection of spices.

An attractive, practical storage shelf is just one of the smart features in our Cabby LT. We have positioned a substantial bathroom, with a WC and a shower cubicle, at the very back. The entrance to the bathroom is positioned between the adjustable beds. It provides more seclusion for the bedroom. The comfortable sitting area, the roomy kitchen section and the wardrobes are in the front section.

Our wonderful angled kitchen is an enticement to devote time to cooking. The glasses can be practically hung underneath the shelves, and there is plenty of room in the cupboards for the crockery.

Spacious and luxurious with the right lighting. The bathroom is a room to enjoy.

The much appreciated angled pantry in the LT models will probably be even more popular thanks to a completely new and unusual cupboard. There is room here for bottles of wine, wine glasses and a flat screen TV. The TV fitting is an extra, but the practical solution is standard.

Live

Take a gang of teenagers to the mountains, the family to Legoland or holiday on your own in Europe. Combi caravans represent flexibility and freedom.

Is there anything better than socialising around the barbeque?

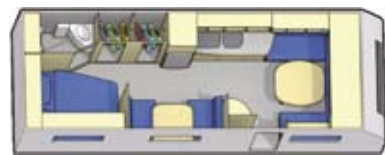

CABBY M

CABBY 700+M

A-dimension	1,100 cm	Internal length	630 cm
Total length body	700 cm	Internal width	234 cm
Total length	841 cm	Weight	1,700-1,800 kg

CABBY 740+M

A-dimension	1,135 cm	Internal length	670 cm
Total length body	740 cm	Internal width	234 cm
Total length	861 cm	Weight	1,900-2,000 kg

Cabby 2009 has a more robust design and more modern lines with dark grey fittings. The mosquito net door is an optional extra.

Holidays are about having the opportunity to be alone and relax, but also about discovering fun things to do with one's nearest and dearest. Our combi caravan even provides space for unexpected visits!

The flexible caravan offers the opportunity for a city break on your own, having guests to stay the night, a holiday in the mountains with friends or a long trip in Europe. It is a caravan that is full of possibilities for a world of opportunities. Comfortable sitting areas and smart storage solutions are quickly converted into six full-length beds. Change the caravan according to your needs in no time. This is flexibility and freedom.

Cosy for two or festive for a group? With a Cabby M you decide yourself how you want it. A combi caravan is the caravan for those who like flexibility without having to forgo the sense of luxury.

Everyone likes a luxuriously wide double bed. The capacity to make up a further four full-length beds with the same level of sleeping comfort isn't bad either.

Cold or hot outside? It makes no difference. Inside a Cabby it is always comfortable. All our caravans have effective underfloor heating and superb ventilation to provide optimum comfort.

CABBY F2B

CABBY 620F2B

A-dimension	1,020 cm	Internal length	555 cm

CABBY 700+F2B

A-dimension	1,100 cm	Internal length	630 cm
Total length body	700 cm	Internal width	234 cm
Total length	841 cm	Weight	1,650-1,800 kg

CABBY 740+F2B

A-dimension	1,135 cm	Internal length	670 cm
Total length body	740 cm	Internal width	234 cm
Total length	861 cm	Weight	1,900-2,000 kg

How do you want it today? The Cabby F2B is the caravan you can change from day to day. Double bed caravan, nursery caravan and guest caravan in one. The middle section contains a wonderful kitchen, wardrobes and a toilet. The convertible sitting area is at the front.

There's room for everybody here. And remember that flexible solutions do not mean that you have to compromise on comfort. Everyone sleeps equally well in the Cabby F2B. Note as well the smart anti-roll guards on the top bunks as an extra, ensuring that everyone sleeps safe and sound.

This is better than at home and with room for everyone. Head cushions are available as an optional extra for those who want to be even more relaxed.

You can never have too much storage. There is room here for everything you want to bring with you without having to take up the living areas.

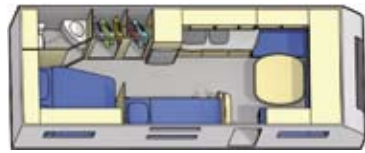

*Julia Saga, Pelle and Charlie
playing croquet.*

Play

There's nothing better than waking up to the pitter patter of tiny feet or the infectious laughter of a child. The nursery caravans are a paradise for large and small.

CABBY M2C

CABBY 700+M2C

A-dimension	1,100 cm	Internal length	630 cm
Total length body	700 cm	Internal width	234 cm
Total length	841 cm	Weight	1,700-1,800 kg

CABBY 740+M2C

A-dimension	1,135 cm	Internal length	670 cm
Total length body	740 cm	Internal width	234 cm
Total length	861 cm	Weight	1,900-2,000 kg

Our nursery caravans are so much more. For sure, we have put life with the children, regardless of whether they are really small or have got a bit bigger, at centre stage, but we all know that everyone has to get on together. Our caravans are therefore a miracle of flexibility.

Irrespective of layout, you will appreciate the generous spaces where maximum use is made of every square centimetre. And what's more, so ingeniously that it never feels cramped. With a substantial storage space that you access from both outside and inside, it is easy to live in the caravan. And there's room for everyone and everything!

Attractive, stylish and always easy to keep clean. Our fabrics maintain the highest quality which is why the caravans have a fresh feel, year after year.

Strong, attractively designed, smart recessed hooks enable everything to be hung up.

Our fixed bunk beds are not just practical and good-looking. They are also extremely comfortable to sleep in.

CABBY F3F

There is room here for a large family and for the children's friends. The large double bed is situated at the very back beside the bathroom.

The convertible sitting area and the bunk bed with an upper bed cupboard are in the middle. The kitchen and the large sitting area are right at the front. A sitting area that is naturally convertible into beds.

CABBY 800F3F

A-dimension	1,195 cm	Internal length	740 cm
Total length body	810 cm	Internal width	234 cm
Total length	942 cm	Weight	2,000-2,400 kg

The Cabby F3F really does have room for everyone. With all the berths made up, eight or nine people can sleep in comfort.

There is room for a lot of people around the dining table and the generous kitchen makes entertaining easy.

Despite the numerous berths, there is still room for seclusion. Climb into the terrifically comfortable, adjustable bed and relax.

CABBY F2C

Being close to mummy and daddy feels safe. Everyone sleeps together here, but nevertheless in their own bed.

Here is a caravan entirely adapted for families with small children.

The generous double bed is situated in close proximity to the bunk bed which has a substantial side rail on the upper bed. Toys, games and clothes are easy to put away in smart storage spaces.

The pleasant kitchen, toilet and wardrobes are located in the middle of the caravan, and in the front you will enjoy being together in the sitting area that, naturally, can be converted into beds.

CABBY 620+F2C

CABBY 700+F2C

A-dimension	1,100 cm	Internal length	630 cm
Total length body	700 cm	Internal width	234 cm
Total length	841 cm	Weight	1,650-1,800 kg

CABBY 740+F2C

A-dimension	1,135 cm	Internal length	670 cm
Total length body	740 cm	Internal width	234 cm
Total length	861 cm	Weight	1,800-2,000 kg

An additional pedestal on which to put a TV is available as a practical extra.

All kitchens have been made even better. Energy efficient fridges are very economical, and the carpet has been made extra durable. Now it's not a disaster if anyone happens to spill the bilberry soup.

Security comes from within

Looking, squeezing and feeling a caravan can get you quite a long way in judging what you are buying. And a large part of the decision is in fact to do with feeling. A feeling for the caravan and what you can see. Does it look good? Does it seem solid? Does it have the equipment and room that I need? What will the neighbours say? It can go on like this for a while.

But what does it look like under the surface? Under the skin. At Cabby we feel that this is the absolutely most important aspect for whether you are going to be happy in your caravan. For even though we put a lot of time and energy into design, configuration and choice of equipment, it is still only a fraction of what we put into what cannot be seen. That which is in the walls and under the floor.

Windy roads are charming. Especially when you can feel safe.

That's why we decided to devote the next few pages to going a bit more deeply into the features that we feel are most important in a caravan. In order to give you the tools to enable you to make the best possible comparisons with competitors. We are convinced that we are well placed in terms of the competition, whoever you compare us with.

Cabby Safety System

The Cabby Safety System is the generic name for our safety systems, a number of unique features that together produce one of the absolutely safest and most pleasant caravans you can have behind your car. Easy to tow, safe and with track stability.

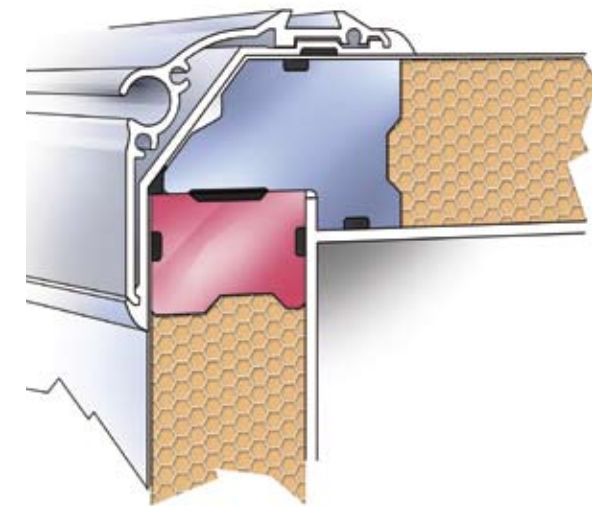

Among other things, the system includes the rigid and well-balanced chassis, the unique suspension, the Delta axle, the wheels, AKS stabiliser hitch, and the ATC anti-skid system. However, thanks to the Cabby method and Power Lock, which do not simply provide superior insulation but also make the caravan extremely rigid, even the body has a major effect on roadworthiness.

Below we present some of these in more detail and naturally we start with the foundation – with the chassis.

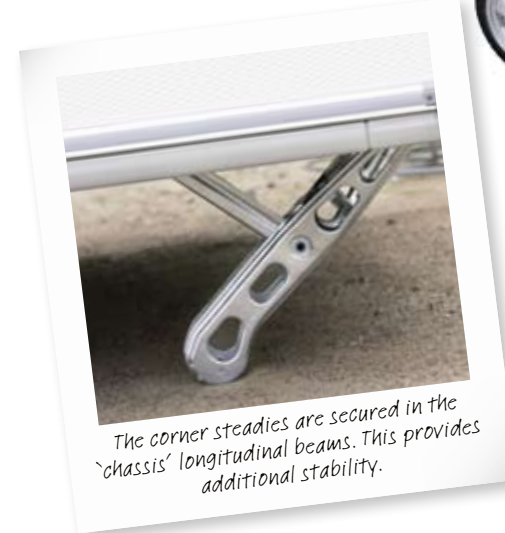

AL-KO chassis – the most stable on the market

Having a Cabby behind the car is associated with pure driving pleasure. Both when it comes to long distance driving on dead straight motorways and if the journey is on small, windy roads. The secret is the well-balanced chassis from AL-KO in combination with the extremely rigid body.

After all, the chassis is the caravan's base and it influences the driving characteristics and the body's strength as well as the future water resistance. A stable and "correctly designed" chassis ensures good driving qualities and does not subject the driver to unpleasant surprises. It should also give the body the correct stability, actively contributing to minimising the body's movements along the seams, which is of some importance when it comes to future water resistance.

Power Lock locks the transitional sections between roof, front and wall without creating thermal bridges. Furthermore, it makes the caravan extremely strong and steady.

The corner steadies are secured in the 'chassis' longitudinal beams. This provides additional stability.

The Cabby Safety System is the generic name for our safety systems. Our caravans are easy to tow, have stable tracking and are safe.

The globally unique ATC anti-skid system, which is standard on all Cabbies,

is able to automatically correct these oscillating motions.

Well-judged braking stretches out the unit and

the snaking is corrected gently and smoothly before you have even noticed it is happening.

At Cabby we have been engaged in research to produce roadworthy chassis designs for many years. The research has led to all our models today having a design that gives the floor and the body the full support of the chassis.

Brackets and cross members

The chassis, with extra long traction spars, is equipped with four supporting brackets along the sides to support the weight of the sides and minimise the risk of the floor becoming bowed. The brackets collect up the strength of the body and give the caravan horizontal stability, minimising the stresses on the floor and the interior fittings.

The fact that the chassis is horizontally stable is an important factor in fixing the axle and the tracking of the wheels. A stable axle and wheel attachment is an important contributory factor for track stability, something that in the final analysis also minimises tyre wear.

The function of the cross members is to provide support for the longitudinal side members in order to avoid distortion and to stabilise the axle beams and the axle.

Aisle beam

Our chassis lies directly against the floor and supports it along the full length – and width – of the caravan. Furthermore, there is a supporting aisle beam in the middle of the floor, directly underneath the caravan's aisle, that guarantees that the floor will not start sagging after a few years. If you have owned an older caravan you are no doubt aware of what it can be like. A stable floor is now even more important, bearing in mind the waterborne heating system that is embedded in the floor.

Corner steadies

Cabby's corner steadies are secured in the chassis' longitudinal beams, in distinction from those of many of our competitors that are attached in the floor. It means that the caravan is more stable when it is parked, at the same time as there is no risk of ending up with a soft and unsteady

floor, which is otherwise common in caravans that are getting a bit old.

Millimetre precision

The dimensions are allocated with millimetre precision in the chassis and axle for each caravan model, depending among other things on weight and length. The suspension is optimised to cope with all types of surface and changes of direction. Thanks to the precise suspension tracking of the Delta axle your Cabby will be calm, stable and entirely without unpleasant surprises, regardless of surface.

ATC – AL-KO Trailer Control

Most people who have driven with a caravan are familiar with the phenomenon that occurs when you reach the "critical speed", which varies depending on factors including the car, the load, the nature of the road, the caravan and the weather conditions. An oscillating motion that starts in the caravan. Until now the only way of stopping this snaking has been very careful braking. Something that can equally well end in a serious accident.

The globally unique ATC anti-skid system, which is now fitted as standard on all Cabby models, is able to automatically correct these oscillating motions. By applying well-judged

braking to the caravan, the unit stretches out and the snaking is corrected gently and smoothly before you have even noticed it is happening. ATC is a compact unit that contains sensors, control electronics and a traversing motor that is connected to the caravan's brake system. To function it requires a correctly installed thirteen-pole socket on the towing vehicle. With an ordinary socket the caravan functions as usual, though without ATC. The sensors continually monitor the caravan's lateral movement and send continuous signals to the control unit that is able to determine whether it has to do anything to maximise driving stability. The control unit can trace oscillating tendencies at an early stage and furthermore distinguish them from other lateral movements such

*Of course it's
nice to get away,
but you have
to be certain of
coming back.*

as long bends and tricky road conditions. It can also sense whether the snaking will abate on its own or not. If not, the caravan's service brake is activated by means of the traversing motor and the unit is gently braked.

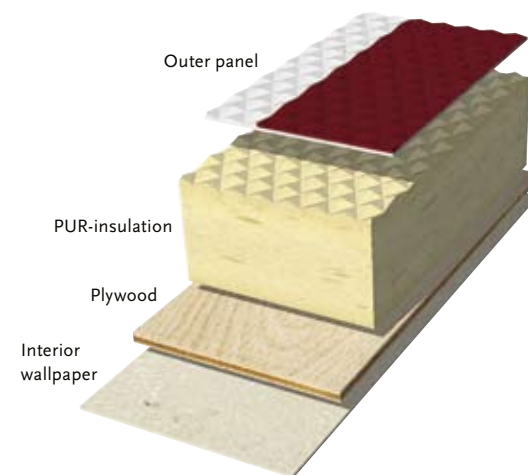

Thanks to ATC you can feel safe behind the wheel on bad roads, and when oncoming trucks get too close or if you have to take sudden evasive action. It is a system which elevates roadworthiness for caravans into the same class as modern cars that are equipped with ESP, and quite simply ushers in a new era when it comes to caravan safety.

AKS Stabiliser Hitch

A secure grip. By means of a friction lining that presses against the car's tow ball, the AKS Stabiliser Hitch provides a stabilising effect that raises the "critical speed". In situations when you are being overtaken by large vehicles, such as trucks or buses, the hitch seems to reduce the lateral forces that arise from the slipstream that is produced by the overtaking vehicle. Together with the other units in the Cabby Safety System it produces superior roadworthiness.

Tyres and rims

So that we can offer maximum road holding and security, we have equipped all caravans with 15 inch aluminium rims (bogie caravans 14") and special, eight-ply tyres as standard (not bogie). Furthermore, the tyres are filled with nitrogen instead of air, the same as in airplanes, in order to extend their service life. As there is no moisture in the tyres, the risk of

Some caravan manufacturers have thicker insulation than us. But none of them have better. Our insulation is superior to anything else.

OK – we admit it. The sun doesn't shine every day in Sweden. That's why we give all our caravans a water test before they leave the factory. Then we know that everything is in perfect working order and that as a customer you can feel safe and dry during all your years as a Cabby owner.

corrosion is minimised and the pressure remains constant over time without being affected by the temperature. A feature that benefits safety, fuel consumption and not least important – the environment.

The Cabby method – the market's best insulation

One of the biggest reasons for choosing a Cabby is located in the walls. We call it quite simply the Cabby method. Anyone who has ever stayed in one of our caravans on a cold winter night or a hot summer day will have thanked their lucky stars that they chose a Cabby.

An extremely highly insulating material and a minimum of seams in the walls and roof are the recipe for success. It means that the cold is kept outside the caravan in the winter and in the summer it is cool even when it is really hot outside. Moreover, the structure is extremely rigid and makes a major contribution to the Cabby Safety System by making the caravan stable and roadworthy.

This is how it works:

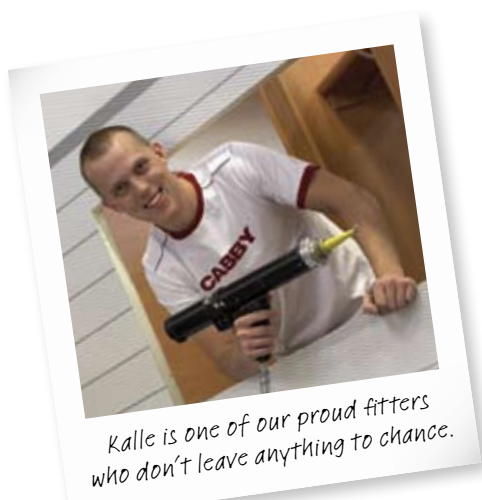

The sides, floor and roof of the caravan are constructed in complete units. We inject polyurethane material, which is highly insulating, at high pressure between outer and inner walls, in the roof and the floor. The polyurethane expands into every nook and cranny in the unit and hardens.

A stable sandwich structure is formed, with plywood on the inside and strong panels on the outside. The construction is immensely strong with very few wooden joists, minimising the risk of thermal bridges.

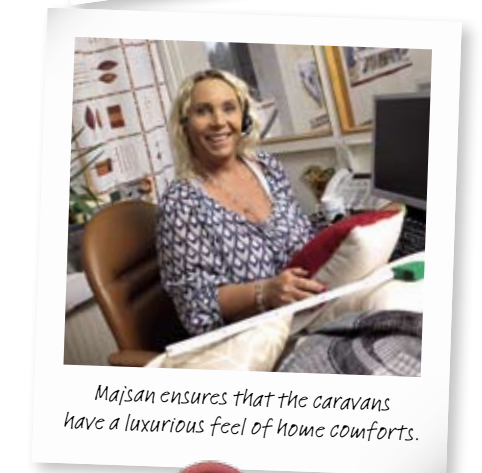

A superior, self-supporting design

The sandwich unit can be compared with an I-beam, where the outer layer forms the beam's load-bearing flanges and the core the beam's rib. When flexural stress occurs, the outer layer absorbs the compressive- and tractive forces, while the core absorbs the transverse forces – which are considerably smaller. The mechanical stability in a sandwich panel is therefore substantially better than all types of timber frame. This becomes particularly evident in situations of dynamic loading, when everything is moving, which is especially relevant in the context of caravans.

The Cabby method's unique qualities, in combination with our unique polyurethane profile – Power Lock – which locks the transitional sections between roof, front and wall without creating thermal bridges, makes the caravan extremely strong and steady. The result is a self-supporting structure and what is the market's most rigid body by far.

Kalle is one of our proud fitters who don't leave anything to chance.

Majsa ensures that the caravans have a luxurious feel of home comforts.

Unique insulating properties

Polyurethane consists of insulating microscopic gas bubbles with a closed cell structure. This means that they are resistant to damp, a superb property as only one percent of moisture in the material reduces the insulating capacity by 25 percent. Damp in the insulation is after all, as you know, also a breeding ground for microorganisms and mould.

The insulation has also proven to have good ageing properties. Today it is known that polyurethane insulation retains its most essential qualities for considerably longer than one hundred years. The technology is gaining more and more ground as an insulation material, not least in the building industry where energy issues are becoming of ever greater importance. The superior insulating qualities of polyurethane are becoming increasingly in demand.

Thermal conductivity

Polyurethane foam (PUR) of Cabby's type has a thermal conductivity of 0.024 W/m° K and insulation of the Ecoprim type has 0.030 W/m° K. This means that Cabby's

Cabby	Walls 32 mm PUR	Floor 36 mm PUR	Advantage PUR
Ecoprim – XPS	40 mm	53 mm	25–55 %
Cellular plastic – EPS	49 mm	63 mm	55–85 %
Glass fibre wool	69 mm	88 mm	160–258 %

A secure grip. By means of a friction lining that presses against the car's tow ball, the AKS Stabiliser Hitch provides a stabilising effect.

PUR insulation has a 25 percent better insulating capacity (K value) than Ecoprim insulation.

A little comparison

Cabby has 32 mm PUR insulation in the walls and roof, and 36 mm PUR insulation in the floor. To clarify the difference we can compare with other materials used in caravans and buildings. The conclusion is simple: even though other caravan manufacturers have thicker insulation than us, they don't have sufficient thickness to approach our insulating qualities.

And when other manufacturers boast about having polyurethane in the window frames for its superior insulation qualities – we have it throughout the entire caravan.

We are proud of our own method – the Cabby Method. The insulation is superior to anything else and as a caravan owner you get a caravan that is well-insulated, modern, extremely stable to drive and with a high trade-in value. A caravan that deals with the cold better than all the others. And which is cooler than all the others in the summer heat.

Thomas works on designing the Nordic region's best caravans.

Monica is one of our skillful fitters.

The heating system

A Cabby is a year-round pleasure. In distinction from the vast majority of other caravans it is pleasant and congenial to live in a Cabby all year round, regardless of the climate outside. Thanks to the well-insulated body it is easy to create an interior environment in which everyone can feel comfortable.

We have chosen to equip all our caravans with waterborne central heating to achieve the absolutely optimum effect. The three heating coils have been placed strategically along the floor and in radiators in order to generate a pleasant, even heat when it is really needed. We have even ensured that the heat reaches into spaces where you keep items such as shoes and ski boots. We have made air gaps all along the walls to enable the warm air to circulate unobstructed. There are air gaps behind the sofas, the beds, the upper cupboards and the kitchen pantry so that the heat in your caravan

is as even and ventilated as possible. In addition it is simple to control the entire heating system from the smart control panel that is strategically positioned in a discrete location in the kitchen section.

At the heart of the heating system is an Alde Compact central heating boiler 3/6 kW (electric/Calor gas). The boiler has three output settings and operates with both 230 V and Calor gas. Not a particularly unique solution. However, what Cabby has over and above the normal radiator system are three heating coils embedded in the floor. Others that employ similar solutions only use two coils. And despite the fact that it is obvious that three coils give a more even heat than two, two coils is the most common system today.

Furthermore, the Cabby method benefits from the insulating effect provided by the heating pipes in the floor being pressed against the plywood floor with a great force, guaranteeing good heat transfer. The superior insulation also guarantees that the heat does not find its way down to the underside of the floor, but gives maximum benefit to the inside. The pipe system is also equipped with three individual shut-off valves.

Cabby's superior insulation also contributes to pushing the boundaries of the outside temperature that a 10 Amp fuse can cope with. Very few campsites currently offer 16 Amps, which is required to be able to utilize the full 3 Kw capacity of the boiler.

The coils in the underfloor heating are particularly effective as the heating plates in the floor distribute the heat evenly.

Best in test!

As the first and thus far only caravan manufacturer, Cabby was awarded full marks, ten out of ten points, for heating comfort in the Danish magazine DCU's winter test (no. 3, 2007).

And according to the Triple Test in the magazine Husvagn&Camping, Cabby is best in test and moreover, you get most for your money.

Always in a Cabby

Your new Cabby is extremely well-equipped from the outset. You can see below which equipment and features we have put into your Cabby – and some of the optional extras you can choose. Would you like to spice up your caravan a bit more?

5 year water-ingress guarantee. 2 year overall guarantee. See the guarantee book.

All year round enjoyment: Waterborne under-floor heating with three heating coils. Alde Compact 3010 3/6 kW (electric/Calor gas) boiler. Radiators with heat exchanger. Heating coils in shoe compartment. Hot water. The market's best insulation with high-efficiency polyurethane. Internal wastewater tank.

Cabby Safety System: ATC. AL-KO chassis. AKS stabiliser. Delta rubber torsion axle. AL-KO tow bar cover. Rear light. High positioned brake light. Gas leak tester. External heating connection. Earth fault circuit breaker.

Cooking enjoyment: Soft close drawers in pantry. Cooker hood ventilator fan with two settings. Three burner cooker. Ceramic mixer tap in pantry. 45 l water tank with exterior refilling. Dometic fridge 179/112 litres freezer/compartment. Without freezer compartment 189/122.

More comfortable sleep: Anatomic viscoelastic mattresses; Bultex 8 cm and Sensus 6 cm. Adjustable head end, divisible in double bed.

Bathroom: Revolving cassette toilet with flushing. Ceramic mixer tap in toilet. 45 l water tank with exterior refilling.

Media: Awning fittings incl. connection for cable-TV. CD-player with RDS-radio. Speakers beside seating area. Preinstalled sound-and picture cable for DVD.

Miscellaneous: 15" aluminium rims (bogie: 14"). One-key-system. Awning illumination. Awning rails in aluminium. Inner-/outer temperature gauge. Transparent sunroof 60x60 cm Semi-tinted windows. Openable front windows. Cassette blinds with mosquito net. Premium corner steadies on all bogie caravans. Lighting in Calor Gas storage compartment. Lighting over cupboards. External storage compartment (not 700+FM). Ski compartment.

Fabrics and leather

As usual, we have worked hard to design and select fabrics and leather. For this year's collection we have also produced a new, modern curtain design. Our fabrics are naturally woven in a hardwearing and easy to maintain material that is specially

produced for high quality furniture. The leather, which is optional, is of the highest quality and is maintained in the same way as a normal leather sofa. You don't necessarily have to have the same fabric throughout your Cabby caravan. If, for

example, you would like to have different curtains than those included as standard in the ordinary collection, you can naturally choose from one of the other collections as an optional extra.

Internal

A selection of our optional extras. Alongside you will see a complete list of what we offer, and the models in which the different accessories fit.
